**PROJECT DESCRIPTION**

Improve alignment to 45 mph speed design. Improve intersection at Brooker Dr and at SR 201--add turn lanes. Widen roadway to 24' and resurface.

**COMMENTS**

County records indicate there is 80' of R/W--from Brooker Dr north a short distance may require some additional R/W. Estimate is to reconstruct the shoulders/slopes to provide for the additional pavement and a sufficient shoulder. Brooker Dr will need to be aligned and some of the many side roads in the same area improved (see below). The Brooker Dr intersection could be included in the "Brooker Drive Extension Project" and would lower the cost of this project.
