PROJECT DESCRIPTION

Signal Upgrades throughout City during course of SPLOST program

COMMENTS

This project would target upgrading existing signalized intersections as well as other unsignalized intersections that meet the warrants. This could be standardizing signal controllers; installing fiber optic interconnects; installing/repairing traffic detection loops; upgrading signal heads; etc. The technology in this field is ever improving. Therefore, this contingency would provide funding for the City to make required upgrades. The allocated funding may improve from 10 to 15 locations over the next 6 years.
